

Audio Production

Audio, like video, is everywhere. It's even more prevalent than visual communication. We have audio in our cars, our workspaces, restaurants, elevators, lobbies, medical offices, retail outlets and strapped to the arms of millions of joggers & cyclists.

Since the mid 1970s, various members of the NW HelpDesk team have been recording and performing audio. We've built recording studios and home theaters. We've provided audio consulting for a diverse array of clients on how to best use their existing audio equipment and acoustic spaces.

In our studio in suburban Portland, we can produce any type of audio you may need: Voice-over, jingles, audio signatures, soundtracks, telephone system greetings, et cetera.

PodCasting. Yeah, we can do that, too. Do you create a spoken or musical audio show or product? Perhaps you're an educator, a lecturer, an instructor or a consultant with an archive of hours of recordings. What if you could turn those into a lucrative new revenue stream offered to a worldwide audience? Call us. We can help with every step of the process--from live recording, to transfer from tape, to MP3 encoding, to an e-commerce web delivery system.

What is Podcasting? Podcasting is the delivery of audio content to iPods and other portable media players on demand, so that it can be played at the user's convenience — sort of a TiVo for Internet audio. And, because podcasts are typically saved in MP3 format, they can also be played on nearly any computer.

It is estimated that, as of Fall 2006, over three million people subscribe to free & paid podcasting services. Podcasting is spreading quickly because of the rapid adoption of MP3 players, and the desire of owners to have fresh content.

This technology lowers barriers to fields of study & entertainment to which many potential listeners may not have previously had ready access. Moreover, it creates an alternate distribution model for audio that lets publishers extend the reach to times when people aren't even connected to the Internet.

Available Services

Expert PC Repair

Remember when you set up your new PC? It ran so smooth & fast. The applications launched quickly. Boot-up and shut down were surprisingly quick. So what happened? Why do machines slow down over time?

In a word... clutter. Every application, new piece of hardware, user account, plug-in and more - whether currently installed or not - leaves remnants in the operating system. An application's built-in uninstall feature does not remove all traces. Even the Windows add/remove function is not as thorough as it should be.

And - possibly at the top of the list - viruses, trojans, spyware, keyloggers and other intruders are notoriously disruptive and dangerous.

Every day, NW Helpdesk helps PC users restore their machines to an efficient and secure condition. We can also help you keep your data protected with customized backup and security plans that are right for you.

Has your machine frozen? Do you fear you've lost critical data? Chances are very good that we can recover it. Give us a call.

Broadband Internet

High-speed data connections are absolutely vital in today's business environment. If you have questions about DSL, Cable Internet,

Wireless Cellular Internet, ISDN or fiber optic, we *will* have the answers you need. We've worked hard to stay at the forefront of these evolving technologies, working closely in the field and in the trenches with all major broadband providers. We know where it's available, what speeds you can expect, how to order it, how to repair it, and how to configure your equipment to use it.

Complete Web Solutions

Need a new web site? Or perhaps your existing site could use a new look and feel?

E-commerce. Do you need to add secure shopping? How about animation? Flash? Video product demo? Your site can be as simple or as complex as you like.

ebay. Do you have a cache of items you've been wanting to sell but just aren't sure how? Do you produce a line of goods, crafts, books, clothing, software, instructional CDs / Videos? What if you could turn that into a lucrative on-going revenue stream? We can make it happen.

e-newsletter. Are you keeping your existing customer base informed about your latest offerings, specials, sales, additions, et cetera? Our team can help you compile your contacts, write the text, and send it to your customers, keeping you in touch.

NW HelpDesk can provide a turnkey solution for any and all your Internet needs. From concept to design to domain naming to hosting, maintenance & custom e-mail. And all at a price that will pleasantly surprise you!

DVD Authoring

NW HelpDesk has produced dozens of DVD projects: corporate video presentations, product demonstrations, real estate portfolios, artist portfolios, high-resolution audio, talent agency portfolios, home movies, family biographies and company training courses. The DVD is surprisingly affordable to produce - especially if the content already exists in a popular format. You probably have video on VHS, images stored either digitally or on film and text describing that content. From there, it's a relatively simple process to create a DVD with menus, music, narration, video, still images & more.

Interactive CD-ROM

What if you could hand a prospective client a CD-ROM that contained everything you'd like them to know about your product or service?

If you're an artist, that CD could have high-resolution images of your work, your studio, and yourself, with accompanying music, interviews, credits, commissions, et cetera.

If you're a realtor, it could contain a walk-through of all your listings, your philosophy, your success stories, interviews with happy clients, et cetera.

For a teacher, author or consultant, it could be an interactive training tool, an accompaniment to your book, a powerful introduction to new audiences or a new source of revenue at your events.

NW HelpDesk can create one for you at a surprisingly affordable cost.

Computer Networks

Networks --wired & wireless--have revolutionized modern communications. All your data can be stored, accessed, transferred, saved, delivered and shared via these technologies.

Imagine being able to access all your computers, printers, cameras, PDAs, e-mail, videos, documents, addresses, contacts, appointments, music, websites and more from any computer on your network? Think of the power. Think of the efficiency. We can make it happen.

We know networks.
